DETAILED ACTION

1. Claims 1-69 are pending.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 5,777,095. The patent discloses a non-pathogenic microorganism used for live vaccines. The non-pathogenicity was obtained by alteration or modification by mutagenization, chemical, enzymatic or heat treatment, or by another equivalent treatment resulting in an modification of the outer surface protein. (See column 19, lines 48-63). The nuclear components are presumed to be intact.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1648

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 5,777,095 ('095).

Claims 1-33 of the instant application are directed to microorganism comprising surface proteins and substantially intact nuclear components, wherein one or more surface proteins have been irreversibly modified such that the microorganism is thereby rendered non-pathogenic. The limitations to the broad claim are various compounds or enzymes that react to the surface proteins or various microorganisms.

The '095 patent discloses microorganism used for live vaccines in a broad sense. This is supported by the statement that mentions a non-pathogenic *E. Coli* as being one example of microorganism (column 19, lines 49-50). The '095 patent also lists modification method, which includes chemical and enzymatic treatment (column 19, lines 57-59).

Art Unit: 1648

It would have been *prima facie* obvious for one of ordinary skill in the art at the time the invention was made to obtain microorganisms of the instant application because the one of ordinary skill would be motivated to use various chemical compounds and enzymatic treatments and various microorganisms to obtain live vaccines that are non-pathogenic as taught by '095 patent, lacking any evidence to the contrary.

Applicants' invention regarding amplification of nuclear components of the microorganism is, however, deemed to distinguish over the prior art.

6. Claims 1-33 are not allowed.
